

Abstract

The present invention relates to a protection structure for use with an electronic device having an interchangeable housing. The protection structure includes a first protection element and a second protection element. The first protection element is disposed between an upper cover and an electronic module of the electronic device. The second device is disposed between a lower cover and the electronic module of the electronic device and coupled to the first protection element. When a user disassembles the upper and lower covers, the first and second protection elements protect the electronic module.
